OUR APPROACH:

Our methods are easily adapted to any size project and to any technology or process.

Drawing upon our project management experience and industry knowledge, our full integrated methodology ensures the success of your projects.

For each individual project we choose the modules (or sections within each module) that are appropriate for your project. Our five-step cycle is comprised of:

ThruPoint's capabilities address three key disciplines:

Applications — the software tools and programs with which end users interact with each other, with other applications, and with partners.

Organization and Process — the people, methods, and tools which provision, administer, monitor, and manage the infrastructure

Infrastructure — the network nodes and circuits that provide common transport, routing, prioritization, and security of your digital information
